

Environmental product declaration

in accordance with ISO 14025 and EN 15804+A2

DL70-R155 (M) 1100 HF 2xQCA WB IP55

The Norwegian EPD Foundation

Owner of the declaration:

Glamox AS

Product:

DL70-R155 (M) 1100 HF 2xQCA WB IP55

Declared unit:

1 pc

This declaration is based on Product Category Rules:

CEN Standard EN 15804:2012+A2:2019 serves as core

IBU PCR - Part B for luminaires, lamps, and components for luminaires

Program operator:

The Norwegian EPD Foundation

Declaration number:

NEPD-6738-6063-EN

Registration number:

NEPD-6738-6063-EN

Issue date: 31.05.2024

Valid to: 31.05.2029

EPD software:

LCAno EPD generator ID: 264491

General information

Product

DL70-R155 (M) 1100 HF 2xQCA WB IP55

Program operator:

The Norwegian EPD Foundation
Post Box 5250 Majorstuen, 0303 Oslo, Norway

Phone: +47 977 22 020 web: www.epd-norge.no

Declaration number:

NEPD-6738-6063-EN

This declaration is based on Product Category Rules:

CEN Standard EN 15804:2012+A2:2019 serves as core PCR IBU PCR - Part B for luminaires, lamps, and components for luminaires

Statement of liability:

The owner of the declaration shall be liable for the underlying information and evidence. EPD Norway shall not be liable with respect to manufacturer information, life cycle assessment data and evidences.

Declared unit:

1 pcs DL70-R155 (M) 1100 HF 2xQCA WB IP55

Declared unit with option:

A1,A2,A3,A4,A5,B6,C1,C2,C3,C4,D

Functional unit:

1 pc DL70-R155 luminaire manufactured in Glamox Keila. Transport to customer, installed and used according to a specific lighting regime. Including waste treatment in Europe at end-of-life.

General information on verification of EPD from EPD tools:

Independent verification of data, other environmental information and the declaration according to ISO 14025:2010, § 8.1.3 and § 8.1.4. Verification of each EPD is made according to EPD-Norway's guidelines for verification and approval requiring that tools are i) integrated into the company's environmental management system, ii) the procedures for use of the EPD tool are approved by EPD-Norway, and iii) the process is reviewed annually by an independent third party verifier. See Appendix G of EPD-Norway's General Programme Instructions for further information on EPD tools

Verification of EPD tool:

Independent third party verification of the EPD tool, background data and test-EPD in accordance with EPDNorway's procedures and guidelines for verification and approval of EPD tools. Approval number: NEPDT41.

Third party verifier:

Vito D'Incognito, Take Care International

(no signature required)

Owner of the declaration:

Glamox AS

Contact person: Birger Holo Phone: +47 97551574 e-mail: birger.holo@glamox.com

Manufacturer:

Glamox AS Birger Hatlebakks veg 15 6415 Molde, Norway

Place of production:

Glamox production site Keila (Estonia) Keki 2 76606 Keila, Estonia

Management system:

ISO 9001, ISO 14001; Molde: ATEX, ISO 80079-34 (IECEx), ISO45001, ISO50001; Kirkenær: ISO 13485; Keila: ISO 45001, ISO 50001; Dobczyce: ATEX, ISO 80079-34 (IECEx), Module D 2014/90/EU

Organisation no:

912007782

Issue date:

31.05.2024

Valid to:

31.05.2029

Year of study:

2023

Comparability:

EPD of construction products may not be comparable if they not comply with EN 15804 and seen in a building context.

Development and verification of EPD:

The declaration is created using EPD tool lca.tools ver EPD2021.09, developed by LCA.no. The EPD tool is integrated in the company's management system, and has been approved by EPD Norway. NEPDT42

Developer of EPD: Tiiu Paavel

Reviewer of company-specific input data and EPD: Andres Martin

Approved:

Håkon Hauan Managing Director of EPD-Norway

Product

Product description:

An architectural family developed for maximum efficacy. The Glamox DL70-R is a lightweight and extremely energyefficient LED downlight family suitable for marine applications on various types of vessels. It offers excellent light parameters, a long lifespan and flicker-free light with low glare. This ensures significant energy savings and sustainability while maintaining the desired visual comfort.

DL70 fits nearly all marine ceilings, is easy to install, and has B15* fire approvals and is marine approved.

This environmental product declaration can be used for the following luminaires:

DL70555940: DL70-R155 (M) 1100 HF 830 2xQCA SM WB IP54 WH DL70555942: DL70-R155 (M) 1100 HF 840 2xQCA SM WB IP54 WH

Total incl. packaging	0,90	100,00

Technical data:

Please visit the product page on our website for more technical information. https://www.glamox.com/global-marine/products/indoor/downlights/

Market:

Global

Reference service life, product

100 000 hours lifetime for the luminaire according to the technical qualities for the product family.

Reference service life, building or construction works

25 years. Standard service life for installation in Marine, Offshore and Wind.

LCA: Calculation rules

Declared unit:

1 pcs DL70-R155 (M) 1100 HF 2xQCA WB IP55

Cut-off criteria:

All major raw materials and all the essential energy is included. The production processes for raw materials and energy flows with very small amounts (less than 1%) can be excluded. These cut-off criteria do not apply for hazardous materials and substances.

Allocation:

The allocation is made in accordance with the provisions of EN 15804. Incoming energy and water and waste production in-house is allocated equally among all products through mass allocation. Effects of primary production of recycled materials is allocated to the main product in which the material was used. The recycling process and transportation of the material is allocated to this analysis.

Data quality:

Specific data for the product composition are provided by the manufacturer. The data represent the production of the declared product and were collected for EPD development in the year of study. Background data is based on EPDs according to EN 15804 and different LCA databases. The data quality of the raw materials in A1 is presented in the table below.

Materials	Source	Data quality	Year
Electronic - Auxiliaries	ecoinvent 3.6	Supplier data + database	2019
Electronic - Cable	Product composition + ecoinvent 3.6	Supplier data + database	2019

System boundaries (X=included, MND=module not declared, MNR=module not relevant)

	P	roduct stag	je		uction ion stage				Use stage				End of life stage			Beyond the system boundaries	
,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,	naw materials	Transport	Manufacturing	Transport	Assembly	Use	Maintenance	Repair	Replacement	Refurbishment	Operational energy use	Operational water use	De- construction demolition	Transport	Waste processing	Disposal	Reuse-Recovery- Recycling-potential
	A1	A2	A3	A4	A5	B1	B2	В3	B4	B5	В6	В7	C1	C2	C3	C4	D
	Х	Х	Х	X	Χ	MND	MND	MND	MND	MND	Х	MND	Х	Х	Х	Χ	X

System boundary:

The analysis is a cradle-to-grave study of one luminaire manufactured and installed, used according to a specific lighting regime over a specific lifetime, including waste treatment at end-of-life.

A1-A5 includes the extraction and production of raw materials, transportation to the production site, the production process itself, transport to the market and assembly.

B6 is the operational energy use stage of the luminaire based on the technical lifetime hours for the product family and the power consumption of the declared luminaire.

C1-C4 includes de-installation of the luminaire, average transport between location/application/installation site and waste treatment facility, waste processing and disposal in Europe. Waste treatment of the product follows the default values provided in EN 50693.

D shows the recyclability of metals and plastics and allows the producers a credit for the net scrap that is produced at the end of a product's life. The benefits from recycling of net scrap are described in formula from EN 15804:2012+A2:2019. Substitution of heat and electricity generated by the incineration with energy recovery of plastic insulation and other parts is also calculated in module D.

Additional technical information:

Please visit our website www.glamox.com for more technical information.

LCA: Scenarios and additional technical information

The following information describe the scenarios in the different modules of the EPD.

Module A4 = Transport from manufacturing location in Keila, Estonia to Glamox central warehouse in Jasin, Poland (1250 km) + average distribution into the Global market (2000 km).

Module B6 = The operational energy use of the luminaire is calculated based on the methodology provided in IBU PCR Part B for luminaires, lamps, and components for luminaires. The energy consumption model for luminaire used in the PCR follows the application scenarios developed in EN 15193:2007. To calculate the electricity use of the luminaire, the following scenario parameters have been applied:

- Product family user scenario = Custom *
- Active power of the luminaire = 8,2 watt
- Passive power of the luminaire (Pp) = 0 watt
- Totally yearly time usage (tD+tN) = 6570 hours
- Standard year time (ty) = 8760 hours
- The occupancy dependency factor (FO) = 1 (factor, no unit)
- The dependency factor (FD) = 1 (factor, no unit)
- The product specific constant illuminance factor (FCP) = 1 (factor, no unit)
- The specific empiric lifetime of the luminaire in years (a) = 15,22 years **

Module C2 = Average transport to European waste treatment facilities (500 km).

Modules C3 and C4 = Waste treatment of the product follows the default values provided in EN 50693, Product Category Rules for life cycle assessments of electronic and electrical products and systems, table G.4. This table specified how different types of raw materials used in A1 will likely be treated during the end-of-life of the product. Waste treatments in C3 include material recycling and incineration with and without energy recovery and fly ash extraction. Disposal in C4 consist of landfilling of different waste fractions and of ashes.

Module D = The recyclability of metals, plastics, and electronic components allows the producers a credit for the net scrap that is produced at the end of a product's life. The benefits from recycling of net scrap are described in formula from EN 15804:2012+A2:2019. Substitution of heat and electricity generated by the incineration with energy recovery of plastic insulation and other parts is also calculated in module D.

The MOW business is of a global nature, that is why it is important to state that the EPD results for these stages are only valid when the products are being treated in Europe when reaching end of life.

Transport from production place to user (A4)	Capacity utilisation (incl. return) %	Distance (km)	Fuel/Energy Consumption	Unit	Value (Liter/tonne)
Truck, 16-32 tonnes, EURO 5 (km) - Europe	36,7 %	3250	0,044	l/tkm	143,00
Assembly (A5)	Unit	Value			
Waste, cardboard and paper, to average treatment - A5 including transport (kg)	kg	0,02			
Waste, packaging, corrugated board box, 100% recycled, to average treatment (kg) - A5, inkl. 85 km transp.	kg	0,13			
Operational energy (B6)	Unit	Value			
Electricity, low voltage, HFO burned in generator, for ship and offshore electricity supply (kWh) - Global	kWh/DU	819,96			
Transport to waste processing (C2)	Capacity utilisation (incl. return) %	Distance (km)	Fuel/Energy Consumption	Unit	Value (Liter/tonne)
Truck, 16-32 tonnes, EURO 5 (km) - Europe	36,7 %	500	0,044	l/tkm	22,00

^{*}The custom user scenario has been developed by Glamox. This scenario is based on our long industry knowledge of the typical use of this product family and the technical lifetime for the luminaire.

^{**}The application specific empiric lifetime is 25 years, but since the luminaire has a technical lifetime for 100 000 hours will the estimated 75% usage yearly exceed this. We therefore use the lifetime hours divided by totally yearly time usage to find our empirical lifetime in this calculation for energy consumption.

Waste processing (C3)	Unit	Value	
Acrylonitrile butadiene styrene (ABS) to recycling	kg	0,00	
Aluminium to recycling (kg)	kg	0,15	
Copper to recycling (kg)	kg	0,01	
Steel to recycling (kg)	kg	0,09

GWP-total = Global Warming Potential total; GWP-fossil = Global Warming Potential fossil fuels; GWP-biogenic = Global Warming Potential biogenic; GWP-luluc = Global Warming Potential land use and land use change; ODP = Depletion potential of the stratospheric ozone layer; AP = Acidification potential, Accumulated Exceedance; EP-freshwater = Eutrophication potential, fraction of nutrients reaching freshwater end compartment: EP-marine = Eutrophication potential, fraction of nutrients reaching marine end compartment; EP-terrestrial = Eutrophication potential, Accumulated Exceedance; POCP = Formation potential of tropospheric ozone; ADP-minerals&metals = Abiotic depletion potential for non-fossil resources; ADP-fossil = Abiotic depletion for fossil resources potential; WDP = Water (user) deprivation potential, deprivation-weighted water consumption

Remarks to environmental impacts

[&]quot;Reading example: 9,0 E-03 = 9,0*10-3 = 0,009"

^{*}INA Indicator Not Assessed

^{1.} The results of this environmental impact indicator shall be used with care as the uncertainties on these results are high or as there is limited experienced with the indicator

A luminaire is a product that consumes energy during the use phase. Combined with a relatively long expected lifetime and the environmental impact of generating electricity, the use phase (B6) will normally be the most contributing stage to the overall environmental impact of the declared unit. It is important to be aware that the actual calculations of the effect of B6 is particularly sensitive to which use scenario and fuel source that is chosen.

^{*}INA Indicator Not Assessed

^{1.} The results of this environmental impact indicator shall be used with care as the uncertainties on these results are high or as there is limited experienced with the indicator

^{2.} This impact category deals mainly with the eventual impact of low dose ionizing radiation on human health of the nuclear fuel cycle. It does not consider effects due to possible nuclear accidents, occupational exposure nor due to radioactive waste disposal in underground facilities. Potential ionizing radiation from the soil, from radon and from some construction materials is also not measured by this indicator.

GWP-IOBC: Global warming potential calculated according to the principle of instantaneous oxidation. In order to increase the transparency of biogenic carbon contribution to climate impact, the indicator GWP-IOBC is required as it declares climate impacts calculated according to the principle of instantaneous oxidation. GWP-IOBC is also referred to as GWP-GHG in context to Swedish public procurement legislation.
