General information on verification of EPD from EPD tools:

Independent verification of data, other environmental information and the declaration according to ISO 14025:2010, § 8.1.3 and § 8.1.4. Verification of each EPD is made according to EPD-Norway's guidelines for verification and approval requiring that tools are i) integrated into the company's environmental management system, ii) the procedures for use of the EPD tool are approved by EPD-Norway, and iii) the process is reviewed annually by an independent third party verifier. See Appendix G of EPD-Norway's General Programme Instructions for further information on EPD tools

**Verification of EPD tool:** 

Independent third party verification of the EPD tool, background data and test-EPD in accordance with EPDNorway's procedures and guidelines for verification and approval of EPD tools.

# **Product description:**

For normal and high volume flow rate ranges.

Rectangular air terminal units for standard applications in supply air or extract air systems with variable volume flow rates.

For more information see: https://www.trox.de/en/vav-terminal-units/tvj-f8650873d3e5f5a2

#### **Product specification**

Rectangular VAV terminal units for variable and constant air volume systems, suitable for supply or extract air, available in 48 nominal sizes. High volume flow rate control accuracy. Commissioning ready device, consisting of the mechanical components and the electronic control components. Each unit contains an averaging differential pressure sensor for volume flow rate measurement and damper blades. Factory assembled control components complete with wiring and tubing Differential pressure sensor with 3 mm measuring holes, thereby resistant to dust and pollution. Position of the damper blade indicated externally at shaft extension. Damper blade open at delivery, thereby air flow also given without control function; except variants with defined safety position NC.

Flanges on both sides, suitable for duct connection.

This EPD includes the environmental data of the product series TVJ.

The following represents a representative dataset of the most sold variant with controller in the declared sales year (TVJ/300x200/BM0).

#### LCA: Calculation rules

# **Declared unit:**

1 pcs TVJ

# **Cut-off criteria:**

All major raw materials and all the essential energy is included. The production processes for raw materials and energy flows with very small amounts (less than 1%) are not included. These cut-off criteria do not apply for hazardous materials and substances.

#### Allocation:

The allocation is made in accordance with the provisions of EN 15804. Energy, water and waste production in-house is allocated equally among all products through mass allocation. Effects of primary production of recycled materials is allocated to the main product in which the material was used. The recycling process and transportation of the material is allocated to this analysis.

# Data quality:

Specific data for the product composition are provided by the manufacturer. The data represent the production of the declared product and were collected for EPD development in the year of study. Background data is based on EPDs according to EN 15804 and different LCA databases. The data quality of the raw materials in A1 is presented in the table below.

# System boundary:

A1 includes the extraction and production of all raw materials used in the product.

A2 includes all types of transportation methods used for the raw materials to the production site in Anholt, Germany.

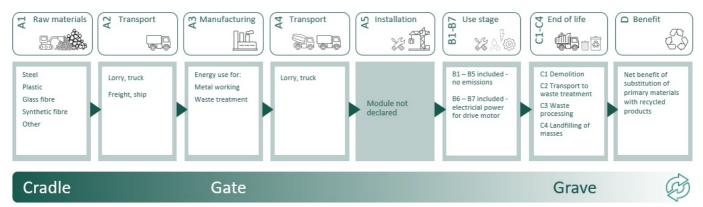

A3 includes the manufacturing and packaging process of the air handling unit.

A4 includes the transport to the market/user.

A5 modules not declared.

- B1 B5 No emissions are released during use of the product (B1). Maintenance (B2) and repair (B3) or replacement of individual components (B4) is not relevant during the service life under consideration (maintenance-free). According to the manufacturer, the product does not need to be replaced during its service life (B5). The modules are therefore labelled with '0'.
- B6 B7 During operation of the building, electrical energy is required to supply the electric drive motor and setpoint adjustments of the product.
- C1 C4 includes the use of energy and other auxiliary materials required to demolish the building or construction in which the product is included, transport from the building site to the waste processing facility, distribution of the product to different waste treatment methods and the disposal.

D includes energy and materials that have achieved a new function and are no longer considered waste.

# Additional technical information:

Suitable for volume flow rate ranges up to approx. 62,000 m³/h or 17,000 l/s.

Suitable for the control of volume flow rate, room pressure or duct pressure.

 ${\bf Electronic\ control\ components\ for\ different\ applications\ (Easy,\ Compact,\ Universal,\ and\ LABCONTROL)}.$ 

High control accuracy.

Closed blade air leakage to EN 1751, Class 1 (B + H = 600 mm).

Casing air leakage to EN 1751, class B.

Optional equipment and accessories:

Acoustic cladding for the reduction of case-radiated noise.

Secondary silencer Type TX for the reduction of air-regenerated noise.

Hot water heat exchanger Type WT for reheating the airflow.

<sup>1.</sup> The results of this environmental impact indicator shall be used with care as the uncertainties on these results are high or as there is limited experienced with the indicator

<sup>2.</sup> This impact category deals mainly with the eventual impact of low dose ionizing radiation on human health of the nuclear fuel cycle. It does not consider effects due to possible nuclear accidents, occupational exposure nor due to radioactive waste disposal in underground facilities. Potential ionizing radiation from the soil, from radon and from some construction materials is also not measured by this indicator.

GWP-IOBC: Global warming potential calculated according to the principle of instantaneous oxidation. In order to increase the transparency of biogenic carbon contribution to climate impact, the indicator GWP-IOBC is required as it declares climate impacts calculated according to the principle of instantaneous oxidation. GWP-IOBC is also referred to as GWP-GHG in context to Swedish public procurement legislation.
